

Bottoms Up Maintenance DAILY AFTER USE CLEANING

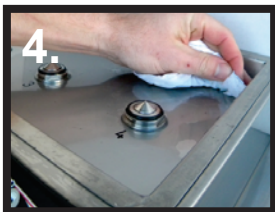

1. Tip drain pan up and remove all tap heads by turning the nut counterclockwise.

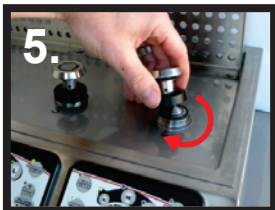

2. Rinse each tap head in a non-chlorine sanitation fluid, once with the tap head in the up position and then in the down position. Store them in a safe place for them to air dry. **IMPORTANT - DO NOT soak the tap heads!**
They are not like soda heads and this will ruin the o-rings

3. Rinse drain pan, drain rack and exposed tap valves with non-chlorine sanitation fluid.

4. Wipe down entire unit with a clean damp cloth. Start with the body and work towards drain pan. (use stainless steel cleaner on the body as needed)

5. Reattach tap heads using a clockwise motion and put back drain pan.
